

AccuShoot LFX – Dry-Fire Mode

AccuShoot Laser Converter

Turn any airsoft rifle into a laser training system

The AccuShoot Universal Laser Converter is a muzzle device resembling a suppressor. It allows for easy conversion of most airsoft rifles into laser training guns just by screwing it onto the standard 14mm CCW muzzle thread. This way, when the airsoft gun is fired, a laser pulse is emitted.

This laser impact is detected by the AccuShoot LFX Box in **Dry-Fire** mode through the **Dry-Fire Camera**, giving the possibility of using readily available airsoft

guns for interactive and dynamic marksmanship training.

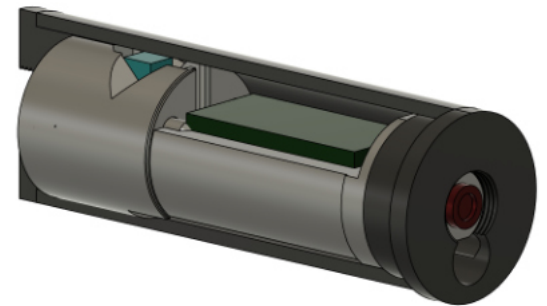

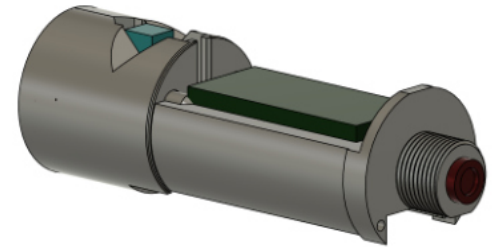

Moreover, by using a gas blowback airsoft rifle (also known as GBBR), a more realistic training experience can be achieved. These guns have identical controls and operation as their real counterparts, and they are also mechanically similar and have simulated recoil, giving much better feedback to the shooter.

In conclusion, this simple device takes laser training to the next level, giving the shooter the possibility of using a wide variety of realistic airsoft replicas in combination with the AccuShoot LFX system. Consequently, the gap between laser and live fire training is narrowed, keeping the practical advantages of laser training while not being limited to inert or toy-feeling laser weapons.

Realistic training. No ammo required.

Key Advantages

- ✓ Allows conversion from a gas or electric airsoft rifle to laser gun, as long as the rifle has the standard 14mm CCW muzzle thread.
- ✓ High variety of available rifle platforms to be converted.
- ✓ Easy installation and usage.
- ✓ Train anywhere for cheap with no risks, no need for expensive shooting installations and no ammo consumption.
- ✓ Allows for fully realistic gun controls and ergonomics.
- ✓ Better and more realistic training.
- ✓ More immersive experience.
- ✓ Can adapt recoil enabled gas rifles.
- ✓ 780nm laser, compatible with AccuShoot LFX in Dry-Fire mode and other laser training systems.
- ✓ Specifically designed to be used with AccuShoot, ensuring absolute reliability and minimizing incorrect shot registering.
